

Our complete *Treasure List* of

SPIRITS

The result of human curiosity and discovery.

Evolve

SPIRITS BAR

FROM CURIOSITY, DISCOVERY EVOLVES.

Humans have long tried to understand our world, explaining its complexities through theories of spirituality, biology, geography and astronomy. This insatiable thirst for understanding fuelled a period of unprecedented discovery during the 1800s with the mapping of our globe, the industrial revolution and the collection of countless botanical, zoological and geological artefacts. Our minds expanded with curiosity as mysterious fossils were uncovered; answering some questions, but presenting thousands more. And just as palaeontologists have captured our imagination with incredible beasts from centuries past, so too have the world's master distillers by hand-crafting the finest spirits through alchemy of earth's elements. These spirits endeavour to explain the complexities of our world and are celebrated, wholeheartedly, at *Evolve Spirits Bar*.

Tasmanian Whisky

Tasmania is ideally situated to make malt whisky, and yet 150 years after the last licensed Tasmanian distillery closed its doors, it took a whisky lover to realise the environment was perfect. Bill Lark, owner and founder of Lark Distillery and renowned godfather of Australian whisky, realised that that everything you need for a world-class whisky was in Tasmania: rich fields of barley, an abundance of wonderfully pure soft water, highland peat bogs and the perfect climate to bring all the ingredients together in a marriage of science, art and passion. So, Bill lobbied the State government to overturn legislation prohibiting the distillation of spirits (a process he says attracted almost no resistance from government) and was successful in his bid.

That is how it all began in Tasmania and our spirits industry has only continued to *evolve* since.

Australian (Mainland) Whisky

A country born of turmoil, escape and the hope for a fresh start, Australia has a rich, if not troubled, history. A vast landmass stretching from the Gibson Desert in Western Australia to the Great Dividing Range in Queensland, it is impossible to quantify its incredible and unique landscape. As such it is with the whisky created on mainland Australia. The individual and unique geographical environment of each distillery combined with each distiller's unique approach makes it difficult to categorise a national style. The fundamentals vary with each distillery: the barley may be a local variety grown for brewing or purpose-grown from paddock to bottle. The yeast can be sourced from brewing companies, imported from overseas, or a wild yeast strain. The peat might be mined or imported depending on the distillery's location. The stills range from traditional Scottish stills to French alembic stills. The casks are often experimental, taking advantage of Australia's vast wine regions and fortified wine. It is an industry that is setting itself apart from the norm and focusing on creating a truly unique spirit.

What can be quantified about Australian whisky is that it has *evolved* from the late 1700s grain spirits into today's booming craft industry, with great care focused on quality whisky.

Scottish Whisky

Scotch is not only a style of whisky but an expression for a country. A remote, harsh, inexplicable and solitary country, it has three perfect elements for whisky making – peat, pure air and pure water. The first recorded reference to whisky is from 1494 in the accounting records for the royal finances, the Exchequer rolls, where an allowance was made for “eight bolls of malt to Friar John Cor wherewith to make aqua vitae”, otherwise known as whisky. The term “scotch” is trademarked and refers only to whisky from Scotland. There are five main whisky regions in Scotland: the highlands, Speyside, Lowlands, Campbeltown and Islay/ Islands. Scottish whisky is distinctly known for its smokiness given by the peat, but it can also have floral notes moving to spicy or cocoa depending on the region.

The traditions of Scottish whisky date back centuries, and some of the techniques and stills have been handed down through generations of distillers. What has *evolved* is a passion for producing an incredible product across generations, and the ability to use technology to enhance these techniques.

Irish Whiskey

It is believed that Irish monks learnt the technique of distilling perfumes in the Middle East between 700-1000 AD, and brought it back to Ireland. The technique was modified to create a spirit known as *Uisce Beath* or *Poitin*, and kickstarted spirit production in Ireland. The first record of Irish whisky was discovered in the Annals of Clonmacnoise in 1405, and the death of Richard Magrannell, the Chieftain of Moyntyreolasis, was attributed to “taking a surfeit of aqua vitae” at Christmas. At the turn of the 18th century, Dublin was a bustling trading port and whisky was a booming business. However it was not to last. A disagreement with the U.S. bootleggers and an Isolationist government policy led to the collapse of the Irish export market in the 20th century and, by the early 1900s, there were less than three active distillers remaining. However, in the late 1900s a new release from Jameson and changing economic conditions, combined with a revitalized export market, rebooted the Irish whisky market to the one we know today.

Irish whiskey, like its Scottish counterpart, has *evolved* over the centuries. Today, a classic Irish whisky could be malted, unmalted, smokey, sweet, single pot distilled or unsmoked. It is generally served neat or over ice.

Japanese Whisky

Japanese whisky is a representation of both its national culture and philosophy. Japanese distillers work in harmony with technology, science and the environment to make a unique whisky that represents the story of Japan, with a deep connection to aesthetics, art, flavours and culture. A Japanese concept, “shibusa” reflects on an object’s natural state: simple, yet deep, and the art of distillation is a reflection of natural flavours from a simple product. Japanese whisky is about displaying the essence of flavours, showcasing both purity and impurity. The difference in barley, Japanese oak, water, geology and geography showcases a lighter, aromatic and floral whisky. The founders of Japanese whiskies Masataka Taketsuru (Nikka) and Shinjiro Torii (Suntory) are reported to be close friends. Masataka left Suntory to found Nikka to create a different style of Japanese whisky.

Japanese whisky may have Scottish roots but it has *evolved* into a unique expression of a culture, landscape and country.

American Whiskey

Alcohol heralds back to ancient times when it was used as medicine, followed by a medical distillate. Once distillation began, it was often dictated by what was available in the environment. Brandy is an excellent example of this, distilled from an abundance of wine in France. In America, it was corn and maize. America had an interrupted start with alcohol production – between prohibition, World Wars One and Two, alcohol production had come to a complete halt and many states were dry. It was after the wars, buoyed by the wine industry and renewed imports of whisky, that production restarted. Bourbon, rye, corn and wheat whiskies are the major distillates from America.

Classic cocktails like the Manhattan and the Old Fashioned *evolved* out of the prohibition era as a way to disguise moonshine and high alcohol spirits smuggled into America.

World Whisky

We live in an era of booming craft whisky ventures across the world, from generation-old families with a history of grape spirits in Europe to fledging distillers in India to large scale operations in Taiwan. While barley is quite common, other cereal grains are also used and dictated by what is common in the region. The flavour profiles from these spirits can be unique, individual and amazing.

The ventures are occurring in regions that have not produced whisky before, such as India and Taiwan. The climate in these areas alters the expansion and shrinkage of the spirit in the barrel, and therefore the taste and time-aging. Kavalan, a distillery where tropical distillation is being examined, has won two world titles for its single malts. Distilleries in France and Spain have access to some of the best casks in the world for aging spirits and fill a cask with spirit days after the sherry, port or wine was emptied. It can take up to six months for casks to reach Australia from Europe.

As the whisky of the world continue to *evolve* and change, so does the adventure continue.

Tasmanian Vodka & Gin

Tasmania is ideally situated to make vodka & gin. The early innovators were looking for a quality spirit that they enjoyed drinking whilst waiting for the whisky to mature. Lark gin started with Bill Lark's partner, Lynn, who was both interested in native pepper berries and looking for a drink herself. That evolved into infusions, and from there came Lark's Forty Spotted gin. The range has branched out into sloe gin, made from infusing gin with sloe drupes (a small plumlike fruit) and saffron gin, created by infusing gin with saffron crocus.

The high quality distilleries and pure water mean Tasmania is also an ideal environment for vodka production. Whether neat or mixed with soda, Tasmanian vodka is carving out its own spot in the market. One Tasmania distillery even makes vodka from the by-product of cheese.

There are over 100 different varieties of Tasmanian gin & vodka on the market, with a rapidly *evolving* market as new botanicals are tried and tested.

Vodka & Gin

Vodka's history is shrouded in debate and myth. It was originally named by the Polish, but Russia is most commonly associated with vodka. In the 15th century, vodka was distilled for medical benefits and known as "*Zhizennia Voda*" or Water of Life. Vodka is a shortened version meaning "*little water*" that arose in the 19th century when it was drunk as alcohol. Vodka is a grain distillate that is heavily influenced by the type of distillation and filtration it undergoes and the amount of times it is filtered. Each distillery has its own process that creates a unique taste. Vodka can be made from anything starch-based such as potatoes, although 90% of vodkas are grain-based. Vodka, unlike whisky, is not aged.

Gin was produced by the Dutch in the 16th century as "*genever*". It was dubbed "Dutch Courage" by the English soldiers. By the 17th century, it was known as gin and had reached England. It had a massive popularity boom, in what was known as the Gin Craze. In the United States, prohibition led to "bathtub gin" as gin did not require aging and could be produced in home stills. Gin is created though a neutral spirit being infused with botanicals to create a unique flavour.

As Vodka and Gin have aged over the centuries the flavours, too, have *evolved* with the spirits.

Cognac, Armagnac & Brandies

The origins of brandy can be traced back to the 8th century when the Mediterranean states begin distilling spirit from grapes. It comes from the Dutch word “*brandewijn*” meaning burned wine. Brandy can be any type of distilled fruit liquor. A distilled apple spirit from Normandy known as Calvados is a style of Brandy, as is Cognac.

Cognac is distilled wine from the Cognac region in France, steeped in history beginning from as early as the 15th century. Nearly all Cognac is made from the grape variety Ugni Blanc. There are four great houses of Cognac that have been in operation since the 18th century: Martell, Remy Martin, Hennessy, and Courvoisier.

Armagnac was first distilled about 200 years earlier than Cognac, in the Armagnac Region in Gascony, France. Armagnac is usually made from a blend of grape varieties. The geographical differences between Cognac and Armagnac result in different soil profiles, climate and grape varieties that produce very different flavours. Additionally, Armagnac is often single-distilled whereas Cognac is double-distilled.

A Phylloxera plague in the 19th century was devastating to grapes, forcing producers to *evolve* and use new grape varieties for Cognac & Armagnac.

Rum & Rhum

Rum's story begins in the Caribbean Islands, where the explorer Christopher Columbus traded sugarcane seedlings for goods. Initially, the seedlings were used in the colonies for sugar production. A few hundred years later, it was discovered that molasses, a by-product from sugar production, could be distilled. The appearance of column distillation in the 1800s signalled the boom for rum production and, soon after, Bacardi was founded. Rum was especially popular during prohibition. "Rum-runners" from the Caribbean would transport Caribbean rum to outside U.S. waters, load it onto smaller ships and smuggle it into speakeasy bars in the U.S. The sailors discovered that a percentage of the rum evaporated during transportation. They named it "the angels' share", believing that angels were drinking it in exchange for safe passage.

Rhum is distinguished from Rum, as it is distilled from sugar cane juice instead of molasses.

The character, aroma and flavour of the rum is greatly influenced by the material used. Rum is often aged in old whisky barrels to give it a softer, deeper flavour and blended by a master blender to achieve perfect taste.

Tequila, Mezcal & Sotol

An ancient Mesoamerican civilisation known as the Olmecs drank the earliest forms of tequila, mezcal & sotol, known as “pulque”, over 3000 years ago. In the 17th century, it was discovered that boiling the heart of the agave plant and distilling the juice created a drinkable spirit known as mezcal. It can take 8-10 years for the agave plant to reach maturity, and it is roasted or smoked in underground pits before the distillation process to impart a deep, smoky flavour.

Tequila comes specifically from the heart of the blue agave plant, which is boiled before the distillation process begins, and is produced in the region of Jalisco and surrounding areas.

Sotol is only made from wild-harvested dasylirion wheeleri, found in the region of Chihuahua. It can take 12-15 years for these plants to reach maturity. Sotol uses a different still to tequila and mezcal, and can have a creamy flavor contrasting to the pepperiness and citrus notes of tequila and the smokiness of mezcal.

Aperitif, Digestive & Liqueurs

Aperitifs, digestives & liqueurs are some of the oldest spirits, originating from a time when liqueurs were used for medicine. An aperitif is a light, dry, refreshing drink to enjoy before an evening meal. There is a theory that the aperitif was created by a French chemist making medicine for the French Foreign Legion in North Africa in the 1800s. It was tried by his wife and her friends who enjoyed it and spread it amongst other friends, increasing its popularity.

A digestive originated as a herbal medicine to aid with digestion, often served as a post-dinner drink. These tend to be slightly more alcoholic, a little sweeter and herbal.

Liqueurs are the oldest-known spirits and have some of the most closely-guarded recipes. At Fecamp Abbey in Normandy in 1510, it is said to be one of the oldest liqueurs to have been produced. Today's liqueurs tend to be an array of flavours from bitter orange, to cream and chocolate, to honeyed whisky.

As alcohol has *evolved* across the centuries, its form and recipe has changed. However, the core principles have remained the same.
